mud volcanoes geodynamics and seismicity This is a list of active, dormant, and extinct volcanoes located beyond planet Earth. They may be designated mons (mountain), patera (an irregular crater) or tholus (small mountain or hill) in accordance with the International Astronomical Union's rules for planetary nomenclature. Many of them are nameless.

mud volcanoes geodynamics and seismicity A hot spring is a spring produced by the emergence of geothermally heated groundwater that rises from the Earth's crust. While some of these springs contain water that is a safe temperature for bathing, others are so hot that immersion can result in injury or death.

mud volcanoes geodynamics and seismicity Submarine volcanism and associated volcanic seamounts are a common characteristic in several marine environments and represent an important proportion of the world's seafloor (Harris et al., 2014). In the Mediterranean Sea, volcanic or mass transport deposit-generated tsunamis can have a strong geohazard impact owing to the more enclosed and shallow setting in which they propagate (Lo Iacono et ...

mud volcanoes geodynamics and seismicity The East African rift system shows up at the surface as a series of several thousand kilometers long aligned successions of adjacent individual tectonic basins (rift valleys), separated from each other by relative shoals and generally bordered by uplifted shoulders ( ). Each basin is controlled by faults and forms a subsiding graben or trough, near one hundred kilometers long, a few tens ...
