multilingual natural language processing applications from theory to practice ibm press Considering the vertices  $v_i$  and  $v_j$  in  $G$ , let  $\hat{\Pi}(v_i, v_j)$  denote the set of simple paths between  $v_i$  and  $v_j$ . As there may be multiple paths between two fragments, we need to select the paths that are most likely to appear in the query graph for the natural language question  $N$ . Generally, the more relevant a path  $L$  is to  $N$ , the larger the probability it belongs to the BGP of  $N$ .

**Interactive natural language question answering over**

multilingual natural language processing applications from theory to practice ibm press In general, we are interested in whatever helps, will help eventually, or might help computers meaningfully deal with language data.. The conference is intended to encourage exchange of opinions between the scientists working in different areas of the growing field of computational linguistics and intelligent text and speech processing.
