nitro explosives a practical treatise concerning the properties Boat Tailing - Tapering that part of the projectile behind the driving band so as to reduce air resistance (drag), especially at low velocities. This type of design gives a projectile greater range but tends to increase wear on the gun barrel. It was long thought that boat tailing caused greater dispersion in the impact pattern, but a study published in 1978 by the US Army's Ballistic Research ...

nitro explosives a practical treatise concerning the properties The formation of a peptide bond between two amino acids involves two steps. The first step is the activation of the carboxyl group of one residue; this step accounts for a key step in the synthesis of a large number of bioorganic molecules, in particular during peptide synthesis (Sheehan and Hess, 1955). If the activation of carboxylic acid is slow, the coupling reagents will be degraded and ...
